FOOD SOURCE, THE
EARTHWORM**

MOTOMCO MOLE KILLER

FARM & HOME

3MM-6

How to Use Motomco Mole Killer

NOTE: Must be used underground

1 Verify Active Runways

Use your finger, small wooden dowel or a narrow rod to puncture a hole in the top of subsurface** runways. NOTE: Be careful to not crush runway.

Mark opened runways and revisit them 48-72 hours later. Runways that have had holes resealed within 72 hours should be baited. (See Step 2)

2 Bait Active Runways

Make a hole in the top of the runway with a rod slightly larger than the diameter of the bait.

Drop one worm into the opening, ensuring that the worm is completely in the runway. No part of the worm should be exposed.

Carefully reseal by pinching hole closed. If not possible, cover with a small rock. Repeat bait application every 5-10 feet of active runway.

3 Determine Baiting Results

Five to seven days after application, check for mole activity using the same procedure for determining initial activity. Return 48-72 hours later and retreat all active runs.

** Deep tunnel/mound systems require a slightly different procedure. See bottom of package for details.

NOTE: All properties are susceptible to recolonization. However, properties near woods, fields, streams/lakes, etc. are especially prone to this. These areas will have to be continually monitored and retreated if activity returns.

Available Exclusively From:

3699 Kinsman Blvd.
Madison, WI 53704 U.S.A.
